

VOLUME 2, ISSUE 2

Understanding Covid Treatment Options:

Yes, Covid-19 can be treated outside of the hospital setting!

We have all heard the saying “An ounce of prevention is worth a pound of cure.” We wrote about it [in December](#), and it is worth revisiting. A growing number of doctors are starting to ask what Dr. Peter McCullough asked at the outset - what treatments can physicians provide to help their patients *before* they are in dire straits requiring hospitalization?

Dr. McCullough has had information removed from YouTube, but you can view [his interview](#) on Joe Rogan’s podcast. Don’t be swayed by opinions of the host or its length (almost 3 hours long). The episode is easy listening and extremely informative. At the link provided, there is a full transcript of the McCullough interview, links to specific segments and a list of topics discussed. The basic message is that treatment for Covid-19 can and should occur early in the course of the disease, and that treatments are available. Dr, McCullough provides some basic science about the virus itself, preventative care, and treatment options do’s and don’ts. Dr. McCullough puts medical care back into the realm of care that we had come to expect in the United States of America in the 21st century. Let’s take back some of the control over our health care by educating ourselves about Covid-19 treatments.

AmericasFrontlineDoctors saved his life!

A member of the TakeBackTeam has recently shared a life-saving testimony of a family friend that successfully survived COVID-19 without hospitalization. For purposes of retelling this testimony, we will refer to the family friend as Bob. Bob is in his mid-70s and lives in the Northwoods. He tested positive for COVID just a few weeks ago and reached out to his friend for help on December 15th. He was severely dehydrated and had been ill for several days, suffering from many of the symptoms that are commonly known from having COVID.

Bob was taking a turn for the worse. He refused to go to the hospital, was sicker than he has ever been, and was unable to take in as much fluid as his body needed. His friends were worried he wouldn’t be able to make it through this fight for much longer. Something had to be done to help. So, without hesitation, his friends went directly to [AmericasFrontlineDoctor.org](#) to schedule a telemedicine consultation with a licensed physician. The process happened exactly as the Frontline Doctors outlined on their website. They requested the consultation on Friday, were contacted by a Doctor on Monday, the prescription was sent to be filled on Tuesday, and they received the medication on Wednesday. Within 48 hours of taking the prescribed medicine,

he was already seeing significant improvement. After just 5 days, Bob had thankfully experienced a substantial recovery.

They believe that the medications along with a regiment of Pedialyte, Ensure, Gatorade, and water were all critical components of his recovery. Although the Covid symptoms had improved significantly in 5 days after he started the medications, he is still feeling some of the effects from the dehydration and malnourishment yet today. He feels incrementally better every day and has resumed many of his normal activities. The treatments offered by the Frontline Doctors, they feel, truly helped save Bob’s life. Sadly, these [treatments](#) are not commonly, if at all, talked about on the Mainstream Media or offered by the majority of Doctors and Hospitals in the area. We must wonder why? Especially if they are working!

Please don’t mistake this as medical advice, but rather be encouraged by this very real testimony of how someone local fought and beat COVID-19 without hospitalization and with proven [treatments](#) that are working on patients here locally and across the world. The [Americas Frontline Doctors](#) are REAL and readily available to help.

TakeBackTeam Information Meeting
Tuesday, January 25th ♦ 6:00pm - 8:00pm
The Pines Event Center
5840 Forest Lane, Rhinelander

- ✓ Bring a friend (or two!)
- ✓ Get to know your school board candidates - Ron Lueneburg and Brett Petrick, who will be on the ballot for the April 5th spring election
- ✓ Review of TakeBackTeam’s efforts, accomplishments, and future goals
- ✓ Learn what you can do to get involved

.....

RHINELANDER SCHOOL BOARD MEETING
Monday, January 17th ♦ 6:00pm
Rhinelander High School

- ✓ Check the [SDR Website](#) for a copy of the [agenda](#) for Meeting time and location specifics.
